

Camako EPM Suite

– AN EASY WAY TO INTEGRATED
PROJECT INFORMATION

Value for Your Projects

Camako EPM Suite brings a fresh approach to project management. It is a simple and flexible web-based application for managing knowledge work intensive projects.

Camako EPM has a suite of modules that can be embedded into an organization's intranet pages for easy access. Its modular structure allows organizations to use only those components that are necessary in support of their key processes. New features can easily be added later, when new project management needs arise.

The **modular and role-based** approach together with web-based technology makes Camako EPM Suite quick and easy to adopt. This helps organizations to make radical cuts to the time and costs related to project management software training and implementation.

Camako EPM Suite is built using Microsoft SharePoint, which enables straightforward integration with existing SharePoint sites and also allows customization

EFFECTIVE TOOL FOR MANAGEMENT

Most project management software applications that are currently available on the market are designed solely for the needs of project managers. Camako EPM Suite is also an effective tool for collaboration between team members and both line and project management.

Camako EPM Suite is a web-based solution, and is well suited for projects with geographically dispersed project teams: project team members can access the system through a browser regardless of their location. Therefore it increases the speed and accuracy of data collection and improves the quality of data.

of the software. The underlying SharePoint and Camako's technologies allow the application to be modified without lengthy programming and testing periods.

Camako EPM Suite enhances the best practices in project and resource man-

agement. The application structure is designed to support PMI's PMBOK® standard, which covers all aspects of professional project management and helps organizations to establish sustainable practices for planning and executing projects.

SIMPLE PROJECTS – COMPLICATED PROJECT TOOLS?

Different organizations have different needs for project management processes and software. Finding the perfect software may often be complicated, and tailoring software for special needs is almost always costly and time-consuming.

Most project management systems that are currently available on the market provide exhaustive functions for schedule planning, cost control and time reporting. Unfortunately, this abundance of functions often makes

the application and user interface too complicated for the average user. If the use of the software requires extensive training and time-consuming memorizing of functionalities, most of its functions will remain unused.

Camako EPM Suite is designed for:

- Consulting organizations
- Engineering organizations
- IT departments and service shops
- R&D organizations
- Specialist organizations in the public sector

ALL THAT PROJECT TEAMS NEED

The web elements of the Camako EPM Suite are designed to support several basic project management processes and various roles in each process:

- Planning and control of project costs and schedules
- Multi-project management
- Resource management
- Time reporting
- Expense reporting

Camako EPM Suite also includes tools that are essential for managing knowledge projects:

- Communication and collaboration
- Document management
- Objectives and deliverables
- Income planning
- Quality management
- Risk management
- Procurement

ROLE-BASED USER INTERFACE

Camako EPM Suite meets the information requirements of various roles

- Time and expense reporting by team members
- Project work and status updated by project managers
- Workload viewed by line managers
- Financial, quality and risk management information viewed by executives

ADVANCED TECHNOLOGY PLATFORM

Camako Platform is a software environment that offers development tools and modules for managing projects and project portfolios through a web-based project central. Projects, schedules, documents and communication with stakeholders are all managed with a single solution that is easily and quickly integratable to other systems within the organization and can be developed as flexibly as required. The technology platform applies the best practices of project management and generally accepted methods, but it can also be easily adjusted to follow the organization's own processes.

Camako EPM Suite is built using Microsoft SharePoint, which enables straight-forward integration with existing SharePoint sites and also allows customization of the software.

Camako EPM Suite can share information with Microsoft Project Server 2007.
